

Lidia Tomás Cobos

Project Manager at Biotechnolo

AINIA

Bilateral Meetings

- Wednesday 15:00-19:15

Organization Type

Beauty Cluster Barcelona

Areas of Activities

Active ingredients and raw materials

Sci-tech Service & Testing

Other

Offering an Innovation

Efficacy studies with ad hoc experimental system based on cellular models.

We offer the screening and evaluation of biological effects on ad hoc cell models simple or complex with co-culture for topic and oral compounds.

Several activities can be performed related with the improvement or boosting the skin health including the effects on skin microbiota.

In case of oral products we use an integrated system formed by an Dynamic digester which reproduces the gastrointestinal system and with cell models which reproduces the specific target organ/celular type.
